The polypeptide is prepd. by genetic engineering of genes encoding the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NS1), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAS of the N-terminal of NS1 (NS1_81) is linked via a synthetic sequence to DNA encoding Region I contg. flanking region less the 18 AAS signal region. This is linked to a synthetic sequence encoding two repeat units from the immunodominant region, which in turn is fused to DNA encoding Region II.contg. flanking region. The Pro residue separating the C Region in encoding an artifact of a filled-in BamHI site; the GIS separating the repeat units and the Region II-contg. CS flanking region is an artifact of a filled-in BamHI site; the GIS region is an artifact of a filled-in BamHI site; the GIS region is an artifact of a synthetic FOKI/TthIII I linker. The peptide can be used in a vaccine for protection against malaria.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Polypeptide comprising immunogenic determinants from P falciparum - for vaccine against malaria infection in humans.

the P. falciparum circumsporozoite (CS) protein [Dame et al., Science 225: 593 (1984)], and the influenza virus non-structural protein 1 (NSI), [Baez et al., Nucleic Acids Research, 8: 5845 (1980)]. The DNA encoding the 1st 81 AAS of the Nrterminal of NSI (1981) is linked to a synthetic sequence encoding four repeat units (the variant form) from the immunodominant region, which in turn is linked via a synthetic sequence to DNA encoding Region I conty. CIanking region less the 18 AA signal region. This is conty. Cianking region II-conty. Ilanking region II-conty. CIanking region is an artifact of a filled-the Region I-conty. CS flanking region is an artifact of a filled-the Region I-conty. CS flanking region is an artifact of a filled-the Region is the Region I conty. CS flanking region is an artifact of a synthetic Fokl/Tthii I is allowed. The peptide can be used in a vaccine for protection

The present sequence is that of recombinant protein CDC/NIIMALVAC-1, which is a multivalent, multistage malarial vaccine. The recombinant protein comprises, melittin signal peptide, (His) 6 tag, T-cell epitope from tetanus toxoid and 21 antigenic epitopes from circumsporozoite protein (CSP), sporozoite surface protein-2 (SSP-2), liver stage mantigen-1 (LSA-1), merozoite surface protein-1 (MSP-1), MSP-2, apical membrane antigen-1 (MAA-1), erythrocyte binding antigen-175 (EBA-175), rhoptry associated protein-1 (RAP-1) and gamete specific antigen, Pfg27. These epitopes were obtained at different stages of the life cycle of Plasmodium falciparum. CDC/NIIMALVAC-1 vaccine has antiparasitic activity and can used for treatment and prevention of malarial infections. Anti-CDC/NIIMALVAC-1 antibodies can be used for detecting P. falciparum in biological samples.
                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

Sequence of the CS gene (AAN81108) is from lambda-mpfl. A recombinant DNA molecule is claimed, comprising functional DNA coding sequence fused, in phase, to a portion of the Pre-S2 region of a hepatitis B virus (HBV) Pre-S2-S protein coding sequence. The functional DNA coding sequence comprises the Pre-S2 coding sequence, Pre-S1 coding sequence, pre-S1 coding sequence, the CS protein coding sequence of plasmodium, or a HIV coding sequence such as an HIV coding sequence such as an HIV envelope gene sequence, e.g. HIV C7 protein coding region, HIV Peptide 121 coding region, or HIV Dreesman peptide coding region.

plasmid WR201 was obtained from the Walter Reed Army Institute of Research, and results from insertion of a 2.3 kb EcoRI fragment from lambda mpfl encoding the complete CS protein gene P. falciparum into vector pUC8. A recombinant DNA vector is claimed, which comprises a DNA sequence contg. the coding sequence of the CS P. falciparum operatively linked to an expression control sequence. Prefd. expression control sequences include the yeast glyceraldehyde-3P-dehydrogenase gene (TDH3) promoter and the yeast confithine carbamoyl transferase gene (ARG3) transcription termination region. A suitable coding sequence comprises the 1215bp Stul-Rsal fragment of WR201 contg. the P. falciparum CS protein coding sequence, minus its first 50bp. Also claimed is a

transformed host cell, a method of culturing the cell to produce CS, the protein, and a vaccine. The vector comprises a 192 bp Sau3A fragment coding for 16 terrapeptide repeats of the P. falciparum CS protein derived from Sau3A digestion of a 1215 bp Stul-Ksaz fragment of WR201 containing the P. falciparum CS protein coding sequence minus approx. Its first 50 bp, or two, three, four or more tandem copies of such 192 bp Sau3A fragment.

circumsporozoite protein - malaria parasite (Plasmodium falciparum) (strain T4, Thail C;Species: Plasmodium falciparum C;Date: 28-Oct-1994 #sequence\_revision 28-Oct-1994 #text\_change 09-Jun-2000

C. Accession: A54533

B.del Portillo, H.A.; Nussenzweig, R.S.; Enea, V.
Mol. Biochem. Parasitol. 24, 289-294, 1987

A. Title: Circumsporozoite gene of a Plasmodium falciparum strain from Thailand. A, Reference number: A54533; MuID:87315205

A, Accession: A54533

A, Status: preliminary

A, Molecule type: DNA

A, Residues: 1-424 CDEL.

A, Cross-references: GB: M19752; NID:9160216; PIDN:AAA29555.1; PID:9160217

C, Superfamily: circumsporozoite protein; thrombospondin type 1 repeat homology

F; 348-402/Domain: thrombospondin type 1 repeat homology

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 18,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          q
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 15, Application US/08318856A
Patent No. 5972351
GENERAL INFORMATION:
APPLICANT: Adrian V.S. Hill, et al.
TITLE OF INVENTION: PLASMODIUM FALCIPARUM MHC CLASS I-
TITLE OF INVENTION: RESTRICTED CTL EPITOPES DERIVED FROM PRE-ERYTHROCYTIC STAGE
TITLE OF INVENTION: ANTIGENS (AS AMENDED)
                                         TITLE OF INVENTION: BN2YME PARTICIPATING IN C-TERMINAL TITLE OF INVENTION: AMIDATION, AND METHOD OF PREPARING SAME AND USE THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Kawamura S., Yokoyama S.;

"Paralogous origin of the rhodopsinlike opsin genes in lizards.";

J. Mol. Evol. 40:594-600(1995).

-i- FUNCTION: VISUAL PIGMENTS ARE THE LIGHT-ABSORBING MOLECULES THAT-
-I- FUNCTION: TISION. THEY CONSIST OF AN APOPROTEIN, OPSIN, COVALENTLY
LINKED TO CIS-RETINAL. THIS OPSIN USES A VITAMIN-A2 CHROMOPHORE.
-i- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

"Structure of the gene encoding the immunodominant surface antigen on
the sporozoite of the human malaria parasite Plasmodium falciparum.";
-I- MISCELLANEOUS: THE C-TERMINAL REGION IS PROBABLY USED FOR ANCHORING THE PROTEIN TO THE CELL MEMBRANE. THE REPEAT SEQUENCES WOULD BE THE SURFACE ANTIGEN OF THE ORGANISM.
